# THE MOST INNOVATIVE PRODUCTION LINE

Porcelanosa welcomes the most automated plant in the world for the production of large format sintered stone slabs, being pioneer in the international ceramic sector.

Innovative precision decoration technique that provides depth to the design and manages to go through the material.

Resolution of 600 dpi and an array of 8 colors never seen before.

Great diversity of textures, finishes and reliefs with 15mm incisions. - 3D Design.

Awarded as best new ceramic production plant by TecAwards 2022, the automation and self-sufficiency of each process and the extensive protection and post-production of the material are the key points to declare this facility a technological pioneer in the sector.

With over 38,000 m<sup>2</sup>, we find ourselves in the most modern facility in the world in terms of processing technology and environmental responsibility. A plant committed to the environment with self-supply energy and 100% reuse of the resources.

## WORKING WITH THE VARIOUS VERSIONS OF ULTIMA15 COUNTERTOP

### CUTTING WITH DIAMOND DISCS

Our products can be cut using diamond discs fitted onto the hand-held electrical grinding machine. The speed of Disc rotation must be high (>10000 RPM) and should have a low feed rate (< 1 m/min). It may be required to cool the disc with water. Recommended discs are the thin types generally used for cutting porcelain stoneware. The surface should be kept on a FLAT base while cutting without any gap underneath

### DRILLING

You can use cutting discs fitted to battery-operated screwdrivers or angle grinders, electrical drills, as an alternative.

### INTERNAL CUT / L-SHAPED CUT

To get internal and L-shaped corners & to reduce the risk of breakage, round off the vertex of the internal corner using bits with a radius of at least 5mm. Then cut with diamond discs, be cautious to stop moving the cutting tool forward. To drill and cut using diamond discs, follow the instructions provided above.

When using these tools:

- Cool the point being drilled with water
- Don't put too much pressure and bear in mind the resistance of the type of laminated stoneware you are working on
- If you are using tungsten bits, start drilling at a low speed
- If you are using drills or screwdrivers, do not select hammering mode

## CUTOUT DESIGN

The minimum gap between a cutout and the edge of the slab must be at least 2". The size recommends distances greater than 2" when the kitchen design allows as it makes the countertop firmer.

## IMPORTANT

All cutout corners must have a minimum diameter of 1/4". Never leave 90° angles. We recommend radiuses of more than 1/4" when the kitchen the design allows as it makes the countertop firmer.
